.. GVM = Gross Vehicle Mass. GVM is the maximum laden mass of a motor vehicle.

- Kerb mass = unladen mass of vehicle with full fuel, excludes tray body for Cab Chassis vehicles.

Δ Payload is the GVM minus the Kerb mass. The kerb mass does not include passengers, luggage, cargo, any accessories fitted or any towball download (as appropriate). Payload is distributed across both the front and rear axles, never exceed the GVM or the axle limits.

... Indicates a premium paint, which is available at extra cost.

- Figures tested in accordance with ADR81/02 (combined test). Figures stated for the purposes of comparison amongst vehicles only. It is unlikely that this fuel consumption figure will be achieved in real world driving conditions. Actual fuel consumption & CO2 emissions depends on factors such as traffic conditions, vehicle condition, how you drive and any accessories fitted.

+ Towing capacity is subject to towbar/towball capacity and vehicle laden condition. The capacity may be reduced if a non genuine Nissan towbar is fitted. The permitted download is directly related to the laden mass of vehicle.

Δ CarPlay is a registered trademark of Apple Inc. Android Auto is a trademark of Google LMC. Compatible device and USB connection required.

# Gross Combined Mass with braked trailer.
