# e-POWER

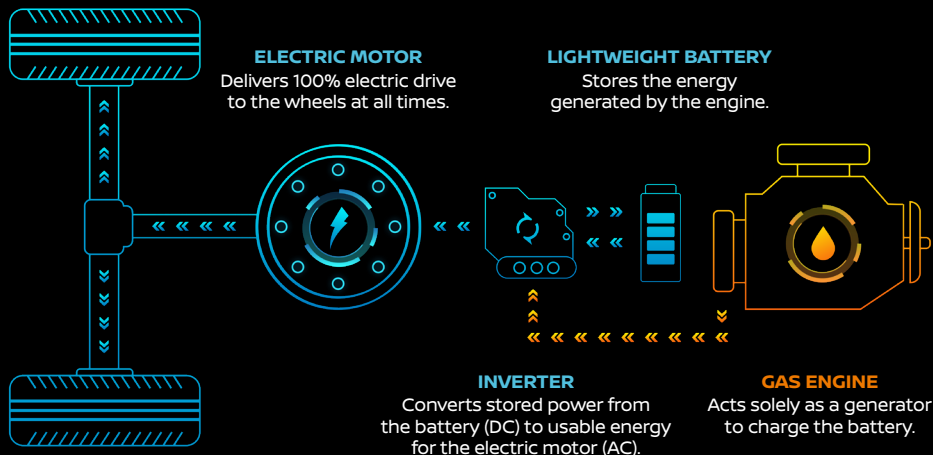

## Daring Electrified Performance

Experience the excitement of electrified driving through Nissan's innovative e-POWER technology.

Built on Nissan's proven EV expertise and refined on the Formula E track, the e-POWER system delivers an EV-like drive with instant torque, powerful acceleration, and a smooth, quiet ride.

e-POWER is a unique system where the wheels are driven solely by the electric motor, while the gasoline engine automatically charges the high-voltage battery when needed, giving you the smooth, responsive feel of an electric drive without the need to plug in.

## Smarter. Safer. More Confident.

Nissan Intelligent Mobility brings together advanced driver assistance and safety technologies designed to help you stay aware of your surroundings, enhance safety on the road, and keep you confidently in control on every journey.

### NISSAN ProPILOT

Available on the Nissan Kicks e-POWER for the first time, ProPILOT combines Intelligent Cruise Control and Steering Assist to help maintain a safe following distance, assist with lane centering, and make everyday driving more confident.

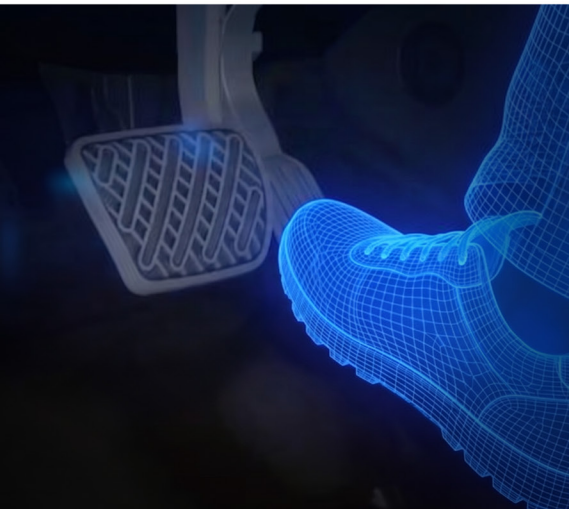

## Intelligent Around View Monitor

Imagine never scuffing your wheels on a curb again. With four cameras giving you a virtual 360° bird's eye-view of the Kicks, plus selectable split-screen close-ups of the front, rear, and curbside views, you'll slide into the tightest spaces and make it look easy. And it can even give you an on screen heads up when it detects moving objects near your vehicle.

## Intelligent Rear View Mirror

When you need a clearer rear view, go from mirror to monitor with just a flip of a switch. When turned on, a camera at the rear hatch expands your rear field of vision, helping you see around obstructions for a completely unimpeded view.

## e-Pedal Step

Experience ease of driving like never before. e-Pedal Step lets you launch, accelerate, and decelerate using only one pedal for a simpler, more convenient drive. When you ease off the accelerator, regenerative braking actively recharges the battery when in Eco or Sport Mode, giving you maximum efficiency without sacrificing performance.

## Intelligent Cruise Control

Experience a more effortless drive with Intelligent Cruise Control that helps maintain a comfortable distance from the vehicle ahead by automatically adjusting acceleration and deceleration.

## Intelligent Forward Collision Warning and Intelligent Forward Emergency Braking with Pedestrian Detection

Every second counts. Get more reaction time with Intelligent Forward Collision Warning that watches two cars ahead. When it detects sudden deceleration, it gives you a visual and audible alert to slow down. To keep you even safer, Intelligent Emergency Braking actively monitors the area ahead for vehicles, pedestrians, and cyclists, automatically applying the brakes to help avoid a collision or lessen the severity of an impact.

## Lane Departure Warning with Intelligent Lane Intervention

Stay on track. When lane markings are clearly visible, the Lane Departure Warning sends a visual and audible alert if you start drifting away from your lane. When the Intelligent Lane Intervention detects that you are straying out of your lane, it gently assists you to return the vehicle to the center of the travelling lane by applying selective braking force or steering assistance for a short period of time.

## Blind Spot Warning with Intelligent Blind Spot Intervention

Change lanes with confidence. The Blind Spot Warning gives you visual and audible alerts when it detects vehicles hidden from sight to help your Kicks avoid vehicles within your blind spot. When the Intelligent Blind Spot Intervention detects that you're trying to change lanes while another car is in your blind spot area, it gently assists the driver to return the vehicle to the center of the travelling lane by applying selective braking force to help keep you within your path for a short period of time.

## Rear Automatic Emergency Braking

Park and reverse with total peace of mind. When driving in reverse, sonar sensors watch out directly behind you for objects and other obstacles you might not see. When a potential collision is detected, the system first provides an audible alert and visual indicator. If you fail to stop, it can automatically apply braking force to help avoid a rear collision or lessen the severity of an impact.

## Rear Cross Traffic Alert

Detecting fast moving objects in your path when reversing, the Rear Cross Traffic Alert sends audible and visual warnings with its specialized rear sensors and reverse camera.

## High Beam Assist

Drive with greater ease at night. High Beam Assist automatically switches your headlights from high beam to low beam when it detects a vehicle ahead, keeping you and other motorists safe and distraction-free.

## Driver Attention Alert

Stay sharp on long drives. Driver Attention Alert continuously monitors your driving style and steering behavior over a period of time to detect changes from your normal pattern. If it detects signs of driver fatigue or decreasing attention, the system alerts you with a visual "Take a Break?" message and an audible chime to suggest it's time to rest.

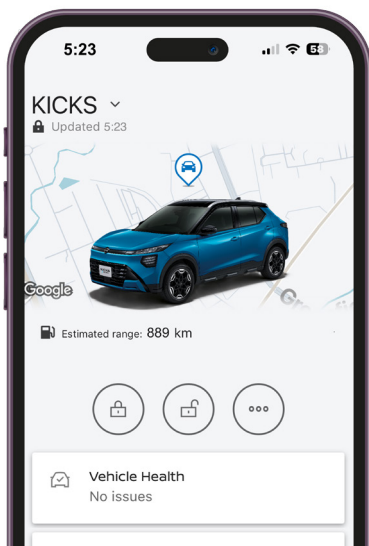

# Control Beyond the Driver's Seat

Through the NissanConnect Services smartphone app, the Nissan Kicks e-POWER keeps you seamlessly linked to your vehicle. From safety and security features like real-time alerts and an in-car SOS button for emergency assistance, to remote vehicle controls and ease of ownership features like maintenance tracking, enjoy added convenience right at your fingertips, wherever life takes you.
